# GENERAL SAFETY WARNINGS AND PRECAUTIONS

<u>/</u>

CAUTION! – This manual contains important instructions and warnings for personal safety. Carefully read all parts of this manual. If in doubt, suspend installation immediately and contact the Nice Technical Assistance.

# CAUTION! – Important instructions: keep this manual in a safe place to enable future product maintenance and disposal procedures.

- The product packing materials must be disposed of in compliance with local regulations.
- Never apply modifications to any part of the device. Operations other than those specified may only cause malfunctions. The manufacturer declines all liability for damage caused by makeshift modifications to the product.
- Never place the device near to sources of heat and never expose to naked flames. These actions may damage the product and cause malfunctions.
- This product is not intended for use by people (including children) with reduced physical, sensory or mental capabilities or who lack experience and knowledge, unless they have been given supervision or instruction concerning the use of the product by a person responsible for their safety.
- Make sure that children do not play with the product.
- Handle the product with care, being sure not to crush, knock or drop it in order to avoid damage.
- The batteries must be removed from the appliance prior to its disposal.
- The batteries must be disposed of in a safe way.
- Keep the new and used batteries out of reach of children.
- Do not swallow the batteries. Risk of chemical burns.
- This product contains a lithium coin battery. If swallowed, it can cause internal burns in just two hours or even death.
- If you think the batteries have been swallowed or placed in any part of the body, immediately contact a physician.
- If the battery compartment does not close tightly, stop using the product and keep it out of reach of children.
- The manufacturer of this appliance, Nice S.p.A., hereby declares that the product complies with Directive 2014/53/EU.
- The instruction manual and the full text of the EU Declaration of Conformity are available at the following Internet address: www.niceforyou.com, under the "support" and "download" sections.
- For transmitters: 433 MHz: ERP < 10 dBm.

# PRODUCT DESCRIPTION AND INTENDED USE

Transmitters of the series MYGOBD (MYGOBD/A) are designed to control automations (gates, garage doors, road barriers and similar).

2

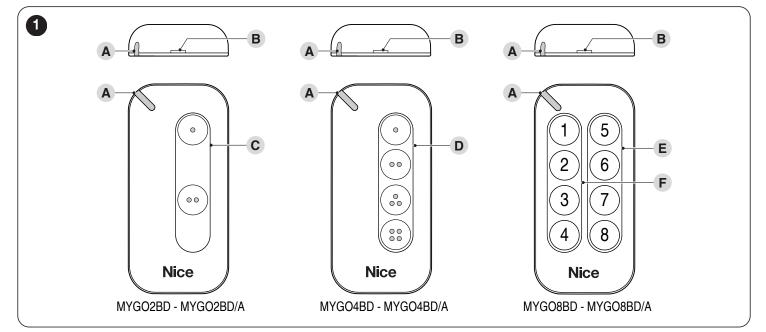

CAUTION! – Any use other than that specified herein or in environmental conditions other than those stated in this manual is to be considered improper and is strictly forbidden!

# 2.1 LIST OF CONSTITUENT PARTS

"Figure 1" shows the main parts making up MYGOBD (MYGOBD/A) transmitters.

The range consists of three models:

- MYGO2BD (MYGO2BD/A) with two buttons
- MYGO4BD (MYGO4BD/A) with four buttons
- **MYGO8BD (MYGO8BD/A)** with eight buttons.

- A Two-colour signalling LED and automation status request button
- **B** Hole for unlocking and removing the rear shell

C Control buttons area for models MYGO2BD (MYGO2BD/A)

- D Control buttons area for models MYGO4BD (MYGO4BD/A)
- E-F Control buttons area for models MYG08BD (MYG08BD/A)

# 2.2 TRANSMITTER FUNCTIONS

**MYGOBD (MYGOBD/A)** are compatible with receivers that adopt the "O-Code" ("O-Code/A") one-way radio encoding system or the "BD" twoway encoding system. The latter system offers the exclusive advanced functions of the "NiceOpera" system, besides additional functions, such as:

- the sending of the confirmation, from the receiver to the transmitter, that the transmitted command was received. After the transmission, if the command was received, the transmitter vibrates and the green LED lights up for 2 seconds. In case of "command NOT received", the transmitter LED, after a series of orange flashes, remains lit red for 2 seconds.
- the sending of the automation's status (for example, whether the gate is open or closed): refer to the paragraph "STATUS REQUEST PROCE-DURE" on page 5).
- indication of the automation's anomaly status: flashing of the red LED and intermittent vibration.

The **MYGOBD (MYGOBD/A)** transmitters, configured in two-way mode, can be memorised on maximum 10 two-way receivers [OXIBD (OXIBD/A)]. If they are configured in one-way mode, they can be memorised on any desired number of one-way receivers.

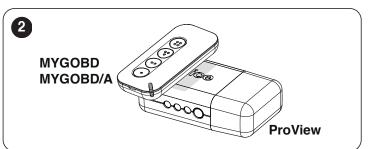

For the encoding switch procedure, refer to the paragraph "**ENCODING SWITCH PROCEDURE**" on page 5.

Each single encoding allows for exploiting only the functions linked to that specific encoding system.

With the memorisation of two-way transmitters in the OXIBD (OXIBD/A) receiver, the identification code of the same receiver is automatically memorised by the transmitter.

WARNING! – If the two-way transmitter in the OXIBD (OX-IBD/A) receiver is deleted, to complete the operation it is necessary to also delete the transmitter's memory. To perform this procedure, refer to the paragraph "DELE-TION PROCEDURE" on page 5.

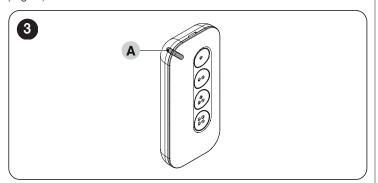

**MYGOBD (MYGOBD/A)** transmitters can be programmed with the ProView device (*Figure 2*).

# 3.1 TRANSMITTER VERIFICATION

Before memorising the transmitter in the automation's receiver, ensure that it is working correctly by pressing any button while observing whether LED  $(\mathbf{A})$  lights up.

If LED (A) fails to light up, check the condition of the battery and replace it if necessary (refer to the "**REPLACING THE BATTERY**" paragraph on page 5).

# 3.2 MEMORISING THE TRANSMITTER

To memorise the transmitter in a receiver, the following procedures can be adopted:

- memorisation in "Mode 1"
- memorisation in "Mode 2"
- memorisation in "Extended Mode 2"
- memorisation through the "Enabling Code" received from a previously memorised transmitter.

These procedures are described in the instruction manual of the receiver or control unit with which the transmitter must be operated. The above-mentioned manuals are also available on the website: www.niceforyou.com.

# 3.2.1 MEMORISATION IN "MODE 1"

This mode allows for memorising in the receiver, once only, all the transmitter command buttons, associating them **automatically** with each command managed from the control unit (default commands).

Refer to the control unit instructions to identify the type of command that will be paired with each transmitter button.

# 3.2.2 MEMORISATION IN "MODE 2"

Allows for memorising in the receiver a single transmitter button, associating it with the commands managed from the control unit (maximum 4, chosen by the user).

# The same procedure must be repeated for each button to be memorised.

# 3.2.3 MEMORISATION IN "EXTENDED MODE 2"

This procedure is the same as the memorisation in **"Mode 2"**, with the added possibility of choosing the desired command (to be paired with the button being memorised) in an **extended** list of commands managed from the control unit (up to 15 different commands).

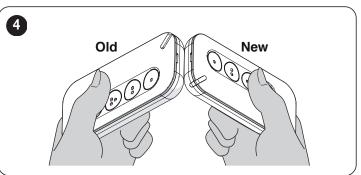

Refer to the control unit instructions to identify the extended list of commands.

# 3.2.4 MEMORISATION THROUGH THE "ENABLING CODE" (BETWEEN AN OLD TRANSMITTER ALREADY MEMORISED AND A NEW TRANSMITTER)

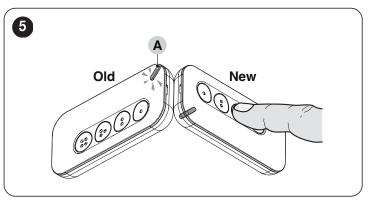

The **MYGOBD (MYGOBD/A)** transmitter has a secret code, the so-called "ENABLING CODE". By transferring this code from a memorised transmitter to a new transmitter, the latter is recognised (and memorised) automatically by the receiver.

To perform the memorisation procedure:

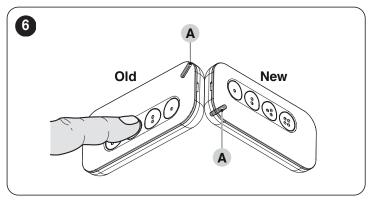

1. Draw the two transmitters, NEW and OLD, near to one another, as shown in "*Figure 4*".

2. Press and release any command button on the NEW transmitter. LED (A) of the OLD transmitter will switch on and start flashing.

**3.** On the OLD transmitter press and release any command button. Once the code has been transferred, for an instant both the transmitters (NEW and OLD) will vibrate and their green LEDs (**A**) will light up (end of the procedure).

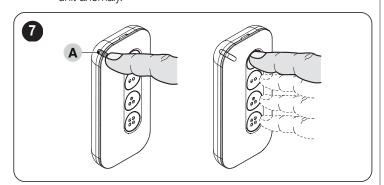

After passing the enabling code on the NEW transmitter, for the procedure to succeed the transmitter – within the first 20 transmissions – must be used at least once near the automation.

### Δ STATUS REQUEST PROCEDURE

The following procedure can be used to know the automation's status through the transmitter (for example, whether the gate is open or closed). To request the status:

- 1. press and release the "Status request" button/LED (A)
- 2. press and release the command button associated with the automation for which the status is being requested 3.
  - observe the colour of LED (A):
    - GREEN: gate/door OPEN
    - RED: gate/door CLOSED
    - ORANGE: partial opening/closing - RED FLASHING and INTERMITTENT VIBRATION: control unit anomaly.

If the transmitter is memorised in multiple automations and a status request is made, the transmitter will only signal the status of the automation that responded first to the status request or that falls within the transmitter's range. In this specific case, Nice S.p.A. cannot offer any guarantee regarding the status of all the automations.

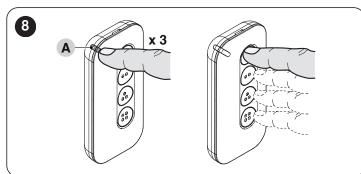

### 5 ENCODING SWITCH PROCEDURE

This procedure allows for modifying the type of encoding system ("O-Code", "O-Code/A" or "BD") associated with a single command button.

MYGOBD (MYGOBD/A) is configured by default in two-way mode with "BD" radio encoding. If the system's automation uses the one-way "O-code" ("O-Code/A") encoding system, the "encoding switch" procedure must be carried out for each command control to be associated with the automation.

To perform this procedure:

- 1. identify the button to be associated with the automation on the transmitter
- 2. press and release the (A) button/LED 3 times
- 3. press and hold for 3 seconds the command button chosen at Point
- 4. the RED LED (A) indicates that the "O-Code" ("O-Code/A") oneway encoding has been set.

To restore the "BD" two-way encoding, repeat the procedure: the GREEN LED will signal that the "BD" encoding has been set.

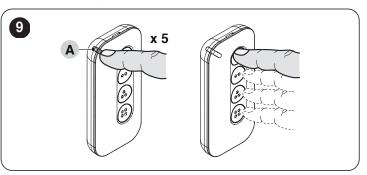

- A command button can only be memorised in multiple automations if the same radio technology is used (either one-way or two-way).
- Each single encoding allows for exploiting only the func-tions linked to that specific encoding system.

### **DELETION PROCEDURE** 6

This procedure can be used to restore the transmitter's factory conditions. At the end of the procedure, all the previously memorised settings will be lost.

To perform this procedure:

- press and release the (A) button/LED 5 times 1.
- 2. press and hold any control button until the **RED** LED (A) lights up; then release the button
- 3. press and release the same command button within 3 seconds: LED (A) will signal the deletion with RED FLASHES.

# REPLACING THE BATTERY

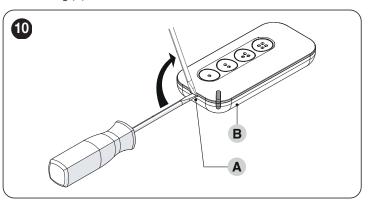

# Keep the new and used batteries out of reach of children.

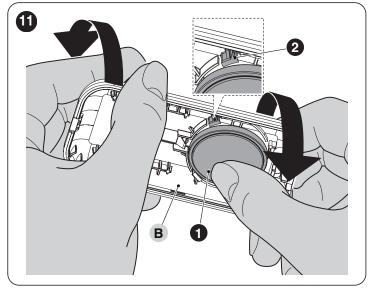

# Do not swallow the batteries. Risk of chemical burns or even death.

When the battery is flat and a button is pressed, the corresponding signalling LED fades and the transmitter will not transmit. With the battery almost flat, the signalling LED emits red flashes during the transmission process. To restore normal transmitter operation, replace the battery with a version of the same type, while observing the polarity. To change the battery:

insert a screwdriver (or similar object) through hole (A) to unlock the 1. casing (B) so that it can be removed

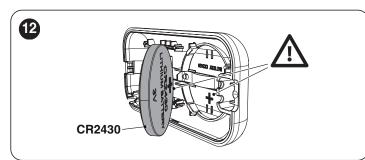

2. press the battery in point (1) and twist the case (B) to release the battery from the clip holding it (2) so that it can be removed

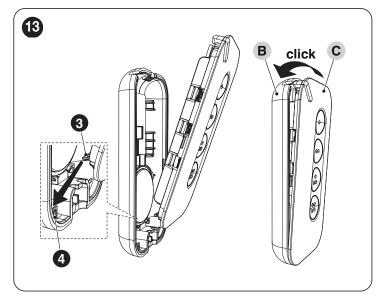

3. replace the battery with another of the same type.

# When inserting the new battery, be careful to respect the polarity.

4. reassemble the remote control by slotting the protruding parts (3) into their housings (4) and closing the front (C) so that it snaps onto the case (B).

### 8 PRODUCT DISPOSAL

# This product is an integral part of the operator and must therefore be disposed of with it.

As with the installation, only gualified personnel must dismantle the product at the end of its life.

This product is composed of different types of materials. Some of these materials can be recycled; others must be disposed of. Please enquire about the recycling or disposal systems in place in your local area for this type of product.

# WARNING

Some parts of the product may contain polluting or dangerous substances. If not disposed of correctly, these substances may have a damaging effect on the environment and human health.

As indicated by the symbol shown here, this product must not been disposed of with household waste. Separate the waste for disposal and recycling, following the methods stipulated by local regulations, or return the product to the seller when purchasing a new product.

# WARNING

Local regulations may impose heavy penalties if this product is not disposed of in compliance with the law.

#### 8.1 **BATTERY DISPOSAL**

#### WARNING /ľ

The batteries must be removed from the appliance prior to its disposal.

The batteries must be disposed of in a safe way.

The flat battery contains toxic substances and must not be disposed of with common waste. Dispose of according to separate waste collection methods as envisaged by current local standards.

All technical specifications stated in this section refer to an ambient temperature of 20°C (± 5°C). Nice S.p.A. reserves the right to apply modifications to the product at any time when deemed necessary, without altering its functions and intended use.

The range of transmitters and the reception capacity of the receivers are heavily affected by other devices (alarms, headphones, etc.) operating on the same frequency in your area. Under such conditions, Nice S.p.A. cannot provide any guarantee with regard to the actual range of its devices.

Table 1 **TECHNICAL SPECIFICATIONS** Description **Technical specification** MYGOBD (MYGOBD/A) Product type Two-way transmitter Power supply 3 Vdc lithium battery type CR2430 approx. 3 years, with 10 command **Battery life** transmissions per day Frequency 433.92 MHz Radiated power (ERP) < 10 mW **Radio encoding** BD - O-Code - O-Code/A **Operating temperature** -5°C ... +55 °C IP 30 (suitable for use at home indoors or **Protection rating** in outdoor areas under cover) **Dimensions** 72 x 34 x 110h mm Weight 20 g

# O CONFORMITY

# 10.1 SIMPLIFIED EU DECLARATION OF CONFORMITY

The manufacturer, Nice S.p.A., declares that the product MYGO2BD - MYGO4BD - MYGO8BD is compliant with the directive 2014/53/UE. The full text of the EU declaration of conformity is available at the following internet address: https://www.niceforyou.com/en/support.

### 10.2 COMPLIANCE WITH THE FCC RULES (PART 15) AND WITH RSS-210 RULES

This device contains licence-exempt transmitter(s)/receiver(s) that comply with Innovation, Science and Economic Development Canada's licence-exempt RSS(s); and with Part 15 of the FCC rules of the United States of America. Operation is subject to the following two conditions: (1) This device may not cause interference. (2) This device must accept any interference, including interference that may cause undesired operation of the device. Any changes or modifications made to this device, without the express permission of the manufacturer, may void the user's authority to operate this device.

# **10.3 BATTERY WARNING**

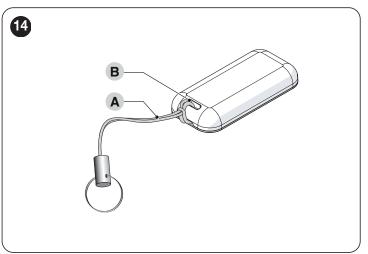

# WARNING!

- **INGESTION HAZARD:** This product contains a button cell or coin battery.
- **DEATH** or serious injury can occur if ingested.
- A swallowed button cell or coin battery can cause Internal Chemical Burns in as little as 2 hours.
  KEEP new and used batteries OUT OF REACH
- KEEP new and used batteries OUT OF REACH of CHILDREN.
- Seek immediate medical attention if a battery is suspected to be swallowed or inserted inside any part of the body.
- Remove and immediately recycle or dispose of used batteries according to local regulations and keep away from children.
- Do NOT dispose of batteries in household trash or incinerate.
- Even used batteries may cause severe injury or death.
- Call a local poison control center for treatment information.
- Only use this product with CR2430 type batteries.
- A statement indicating the nominal battery voltage.
- This product uses non-rechargeable batteries and are not to be recharged.
- Do not force discharge, recharge, disassemble, incinerate or heat above specified operational temperature. Doing so may result in injury due to venting, leakage or explosion resulting in chemical burns.
- This product contains non-replaceable batteries.

# 1 ACCESSORIES

# **11.1 STRING FOR KEYRING**

The string (**A**), supplied as an accessory with the transmitter, is useful for fastening the transmitter itself to a keyring or other similar object. To fasten it, wrap the string around slot (**B**) present on the transmitter.
